ML HW10

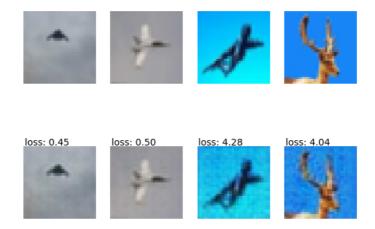

by bo6902034 黃柏諭

Problem 1

• baseline (fcn)

• best (cnn)

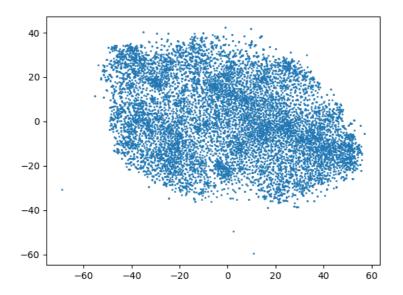

Problem 2

根據觀察Kaggle上的AUC score結果,使用n_component = 3。

	Baseline	Best
KNN	0.59977	0.61619
PCA	0.62752	0.55873

Problem 3

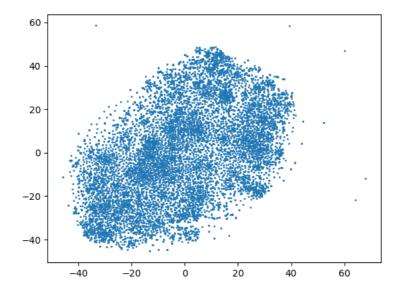

• original

• baseline

• best

Problem 4

- f1 score需要找出明確的threshold,ROC-AUC score則不需要,可以專注在model改進上。
- ROC-AUC score能夠平等的重視兩個class的分類表現,f1 score較適合在skew data set作為評分標準,例如罕見疾病的辨識等。
